Transferable Iqama — Saudi Arabia

CAREER OBJECTIVE

Full Stack Developer with 4+ years of experience designing and building scalable web applications using Java, Spring Boot, React, PostgreSQL, and cloud-native technologies. Experienced in developing end-to-end solutions for real estate and travel platforms, including REST APIs, responsive user interfaces, authentication, caching, microservices, and cloud deployments. Passionate about delivering secure, high-performance applications that improve business outcomes.

EDUCATION

Indian Institute of Information Technology, Agartala

July 2018 – July 2022

– Bachelor of Technology in Computer Science and Engineering

PROFESSIONAL EXPERIENCE

Software Engineer – Daisyon Technologies, Patna

August 2025 – June 2026

- Developed and maintained full-stack web applications using Java, Spring Boot, React, and PostgreSQL.
- Collaborated with cross-functional development and DevOps teams to deploy and maintain React applications, configuring production servers, optimizing deployment pipelines, and providing on-call support for critical production incidents.
- Built and integrated RESTful APIs between React frontend and Spring Boot backend services.
- Optimized REST APIs and database queries, reducing average response time by approximately 30% and improving application performance.
- Participated in Agile sprints, code reviews, debugging, and production releases while ensuring high code quality.

Full Stack Developer – PropertyHub, India

December 2023 – June 2025

- Developed responsive React components for property search, listings, and dashboard features.
- Integrated React frontend with Spring Boot REST APIs, improving user experience and application responsiveness.
- Constructed a scalable real estate platform utilizing Spring Boot, React, and PostgreSQL, delivering 99.9% uptime and supporting 10,000+ concurrent users with sub-second latency for property listings.
- Integrated Elasticsearch for advanced property search functionality, reducing query response times by 40%.
- Implemented Spring Security with JWT authentication, ensuring secure access control for property listings and transactions.
- Optimized database performance using Spring Data JPA, Hibernate caching, and query optimizations, leading to 35% faster query execution.
- Used Spring Boot and RabbitMQ to set up an automatic email notification system for new property listings and price changes.
- Implemented Redis caching to speed up frequently accessed property details, improving application performance.
- Conducted load testing with JMeter, ensuring the platform could handle high traffic and maintain uptime.
- Used Docker and Kubernetes to deploy microservices, improving scalability and deployment efficiency.

Software Development Engineer – RateGain Travel Technologies, India

July 2022 – November 2023

- Developed and maintained backend services powering a high throughput travel platform with 30M+ daily requests using Spring Boot and Spring WebFlux for asynchronous, non-blocking processing.
- Implemented a new adapter with a focus on abstraction to ensure a maintainable codebase. Conducted gap analysis to seamlessly connect the adapter with other microservices, ensuring efficient integration. Worked with teams in NOIDA, Dallas, and London to enhance scalable hotel distribution software.
- Led deployments of containerized microservices using Kubernetes on AWS EKS, ensuring high availability and seamless scalability.
- Developed a comprehensive caching and rate-limiting solution using Redis-bucket4j for the distributed system, significantly enhancing performance and ensuring stable service availability.
- Configured AWS Glue to create and manage virtual tables for structured and semi structured data stored in Amazon S3, enabling seamless querying and data analysis through Amazon Athena.
- Implemented Change Data Capture (CDC) workflows with Kafka, enabling real-time synchronization across microservices.

FINAL YEAR'S PROJECTS

Machine Learning Based Malware Detection System

Jan 2022 – May 2022

Python, Flask, Scikit-Learn, Pandas, NumPy, XGBoost, Joblib

- Designed and implemented an end-to-end malware detection platform capable of classifying Windows PE binaries using static analysis techniques.

- Processed and analyzed 138K+ executable samples and engineered 54 PE-header and entropy-based features for model training and evaluation.
- Applied feature selection techniques to identify the top 14 discriminative features, reducing dimensionality and improving model efficiency.
- Evaluated multiple ensemble learning algorithms including Random Forest, Gradient Boosting, AdaBoost, and XGBoost for binary classification.
- Built a Flask-based inference API that extracts executable metadata and performs real-time malware prediction using serialized models.
- Developed a secure backend pipeline using Python modules including pefile, Werkzeug, and Joblib for feature extraction and model deployment.

SKILLS

Programming Languages:	Java, JavaScript (ES6+), Python, C/C++, SQL
Frameworks & Libraries:	SpringBoot, Spring Security, Spring MVC, React, ORM (Hibernate — Spring Data JPA) Flask, Scikit-Learn, Pandas, NumPy
Database Management:	MySQL, MongoDB, PostgreSQL, Redis, MariaDB
Cloud & DevOps:	Docker, Kubernetes, ElastAlert, Jenkins, AWS (EKS, EC2, S3, Lambda, Athena, Glue) ElastAlert
Monitoring:	ELK (Elasticsearch — Logstash — Kibana), Prometheus, Grafana
Tools:	Git, GitLab, BitBucket, Maven, IntelliJ IDEA, VS Code, Postman, Copilot, Cursor AI, Joblib
Testing & Quality:	JUnit, Mockito, SonarQube, JMeter
Machine Learning & Data:	Machine Learning, Ensemble Learning, Feature Engineering, Data Analysis, Model Evaluation, XGBoost, Random Forest, Decision Trees, Gradient Boosting, AdaBoost
Security & Domain Knowledge:	Malware Analysis, Windows PE File Format, Static Analysis, Entropy-Based Feature Extraction
Messaging & Streaming:	Apache Kafka, Kafka Streams, RabbitMQ
Architecture & Patterns:	Data Structures & Algorithms (DSA), Microservices, REST APIs, Event-Driven Architecture JWT, OAuth 2.0, System Design (LLD/HLD), Design Patterns,

CERTIFICATIONS

- AWS Cloud Technical Essentials — Coursera — Jun 2021
- AWS Fundamentals: Going Cloud-Native — Coursera — Mar 2021
- Cisco Networking Academy: Introduction to Packet Tracer — Apr 2021
- Google Digital Garage: Fundamentals of Digital Marketing — Sep 2020
- Sql — HackerRank — Jan 2022
- freelance Consulting — Udemy — Jan 2022
- Speak-Beta Session — May 2021
- Real Product Management — SkillzCafe — Sep 2020

LEADERSHIP EXPERIENCE

Training & Placement Coordinator – NIT Agartala	2021 – 2022
– Organized and ran on-campus and online placement tests, ensuring a smooth hiring process. – Coordinated meeting spaces, visitor lodging, and logistics for recruiters. – Facilitated pre-placement talks (PPTs), interviews, and onboarding sessions, improving recruiter-student engagement.	
President – Ek Bharat Shreshtha Bharat Club (EBSB), NIT Agartala	January 2020 – July 2022
– Led initiatives to foster student interaction and cultural exchange across states. – Organized multiple events and managed club operations, enhancing community engagement.	

AWARDS & ACHIEVEMENTS

- Rahmani Super 30: Selected after a rigorous four-tier selection process in the top 30 among one lakh applicants.
- Ranked among the top 2.33% of 1.13 million candidates in JEE Main.
